## Professional Summary

Results-oriented Engineering student with strong interest in Artificial Intelligence, Machine Learning, and Computer Vision. Experienced in building intelligent systems through hands-on academic projects and industry internship exposure. Demonstrates strong problem-solving abilities and a solid foundation in model development and evaluation.. Continuously learning and improving technical skills.

## Technical Skills

**Programming Languages:** Python, SQL

**AI & Machine Learning:** Feature Engineering, Model Evaluation, Natural Language Processing (NLP), EDA

**Computer Vision:** CNN, YOLOv8, Object Detection, Image Classification

**Frameworks & Libraries:** PyTorch, TensorFlow, OpenCV, Pandas, NumPy

**Web & Deployment:** Streamlit, Django,

**Core Computer Science & Databases:** Data Structures & Algorithms, DBMS, SQL

**Tools & Platforms:** Git, GitHub, Google Colab

## Education

**B.Tech in Computer Science Engineering**

2022 – 2026

Institute of Engineering and Science IPS Academy, Indore

CGPA: 7.38

## Experience

**Deep Learning Intern at UpToSkills**

Apr 2025 – Jul 2025

- Designed and implemented AI pipelines for real-time video intelligence systems.
- Performed data annotation and dataset management using Roboflow for training computer vision models.
- Applied data augmentation techniques to optimize deep learning model performance.
- Integrated detection and tracking components to enable efficient real-time surveillance analysis.

## Projects

**VisionForge**

[GitHub]

- Developed a ResNet-18 image classifier on CIFAR-10 achieving 93.7% validation accuracy.
- Improved generalization using cosine annealing, label smoothing, and data augmentation techniques.
- Integrated the model into a full-stack Django web application for practical deployment.

**Spam Shield Sentinel**

[GitHub]

- Built an end-to-end NLP pipeline in Python for SMS spam detection using machine learning algorithms.
- Implemented text preprocessing and TF-IDF vectorization on 5,000+ messages, achieving 95% accuracy.
- Developed a backend using Flask/FastAPI and frontend using HTML/CSS for real-time spam classification.

**Weapon Detection System**

[GitHub]

- Built a real-time AI surveillance system using YOLOv8 for weapon detection in video streams.
- Trained and fine-tuned deep learning models on 2,000+ images achieving 80% precision.
- Integrated the system with OpenCV and Streamlit for live monitoring and inference.

## Achievements & Certifications

AWS Academy Graduate – Machine Learning Program (Feb 2025)

Best Employee of the Month, UpToSkills (Jun 2025)

Solved 100+ LeetCode problems in Data Structures and Algorithms
